2016 PROFESSORS' WORKSHOP

Teaching Concrete Materials, Pavements, and Structures (Buildings & Bridges)

PCA Campus, Skokie, Illinois
July 25–29, 2016

Concrete and cement are vital to the nation's construction industry. Few construction projects can take place without cement somewhere in the design. As we think harder about the impact of the materials we choose for roads, buildings, bridges, or infrastructure projects, durable, sustainable, and economical concrete is almost always the right choice. PCA and concrete industry sponsors are offering a workshop to help you teach the fundamentals of this building block to the next generation.

The Professors' Workshop is designed to provide faculty in engineering, architecture, and construction management programs the tools to teach the latest developments in concrete design, construction, materials, pavements, and sustainability.

The week-long event includes networking opportunities to facilitate exchanging ideas with professors from many universities.

View the Workshop Schedule

The registration fee for the workshop is $395 and includes hand-out materials, PowerPoint presentations, resource literature (with a value greater than $2,500), lunches, and receptions. Space is limited to a first come, first served basis.

Teaching the Engineering, Economics, Sustainability, Design, Construction, and Performance of Concrete
