Trend Analysis of Apparent Use of Ready-Mixed Concrete by County with Projections
Realistic five-year consumption and forecast information to be used for planning

- Pools the expertise and resources of PCA's market and economic research departments to produce the best 5 year county level forecast
- Forecasting established twice each year to evaluate the trends in construction activity occurring in each county
- The Ready-Mixed County Forecast is available on a state by state basis
- The data takes into account both the trends that have been occurring within each county over recent years, but does not neglect the established historical base of county cement consumption
- Once the share-of-state trends are established the percentages are multiplied by the state forecast totals to derive the county forecast figures that completes this powerful planning tool
- Takes each individual state's Ready-mixed percentage into the calculations.
- Presents data in a similar format to other Apparent Use reports including county as a percent of state calculations as well as trend growth measures
