

# Enhanced Visibility, *Safer Operations*

ACA member **Buzzi Unicem USA** has rolled out advanced camera and recording systems on mobile equipment at all eight U.S. cement plants, aiming to boost on-site safety through improved operator visibility and incident tracking. By integrating this smart safety technology, Buzzi Unicem is minimizing blind spots, enhancing operator awareness, and reinforcing its commitment to worker safety across all sites.

## Critical Key Points Include:

1

Each haul truck and loader is outfitted with five cameras—four exterior for 360-degree visibility and one in-cab camera focused on the operator. The rugged cameras are built for harsh environments.

2

Operators use a 7-inch in-cab monitor to view live feeds from all exterior cameras, with the option to zoom in on any angle for safer navigation in tight or busy zones.

3

A secure recording system stores 30 days of footage on a removable hard drive, allowing safety personnel to review incidents and identify root causes to prevent future occurrences.
