## American Cement Association, Representing America's Cement Manufacturers

The cement and concrete industry contributes approximately **\$157 billion to the U.S. economy** and directly and indirectly employs 571,000 people. It operates in every state in the continental U.S.

Concrete is formed when cement is mixed with water and aggregate (sand and rock) and allowed to harden. Cement is the glue that holds concrete together.

**Concrete, the second most-utilized material in the world** after water, sees an annual usage of about 260 million cubic yards in the U.S. In plain terms, that's 600 times the amount of concrete in The Pentagon—annually.

Concrete is used to build highways, bridges, airport runways, water and sewage pipes, high-rise buildings, dams, homes, floors, sidewalks, and driveways. Concrete's durability makes it the most disaster-resilient construction material available.

**For decades, ACA member companies** have invested millions of dollars in research and state-of-the-art technology to manufacture resilient and sustainable cement for use in construction.

## MISSOURI ECONOMIC DATA\*

- Cement and related economic contribution to state: **\$4.2 billion**
- Cement and related employees: 4,152 with a payroll of **\$265 million**
- Cement employees: 859 with a payroll of **\$73.6 million**
- Cement and related industries' contribution to state tax revenue: **\$65.6 million**
- Missouri is the **3rd largest** cement-producing state in the nation
- National cement employee average salary: **\$84,330**
